

## AMENDMENTS TO THE CLAIMS

The following claim listing replaces all prior listings and versions of the claims:

### LISTING OF CLAIMS

1. (Withdrawn) An information supply system comprising; a server connected to a network, a terminal device which requests for information over said network, wherein said server transmits to said terminal device information ranked using numeric values of specified information and a weighting entered from said terminal device according to a request from said terminal device.
2. (Withdrawn) The information supply system according to claim 1, wherein said information supply system comprises a database and said database stores said numeric specified information.
3. (Withdrawn) The information supply system according to claim 1, wherein said server presents raked information to said terminal device, interactively changes said ranked specified information in relation with a request from said terminal device and presents thereof to said terminal device.
4. (Withdrawn) The information supply system according to claim 1, wherein said specified information is investment information including a theoretical value, an ups and downs rate, ROE, EPS, PER and PBR used to judge a bankruptcy probability and appropriateness of a stock price.

5. (Withdrawn) The information supply system according to claim 4 comprising: means for providing numeral values of said bankruptcy probability, said theoretical value, said ups and downs rate, said ROE, said EPS, said PER and said PBR respectively, and means for ranking said investment information using said numeral values of said specified information and said weighting.

6. (Withdrawn) The information supply system according to claim 5, wherein said means for providing said numeric values calculates a standard deviation of said specified information.

7. (Withdrawn) The information supply system according to claim 6, wherein said means for ranking ranks said information by weighted mean values using a standard deviation obtained in relation with said specified information and said weighting.

8. (Withdrawn) The information supply system according to claim 5, wherein said means for providing numeric values calculates a deviation value obtained from said standard deviation.

9. (Withdrawn) An information supply method using a server connected to a network and a terminal device which requests said server for information over said network; said method comprising the steps of: receiving a request for information in said server from said terminal device; receiving a weighting in said server from said terminal device; providing a numeral value of specified information in said server; ranking said information using said numeral value of said specified information and said weighting; and transmitting said ranked information from said server to said terminal device.

10. (Withdrawn) The information supply method according to claim 9, wherein said specified information is investment information including a theoretical value, an ups and downs rate, ROE, EPS, PER and PBR used to judge a bankruptcy probability and appropriateness of a stock price.

11. (Withdrawn) The information supply method according to claim 9, wherein said step for providing numeral values calculates a standard deviation of said specified information.

12. (Withdrawn) The information supply method according to claim 9, wherein said step for ranking ranks information from a weighted mean values using a standard deviation obtained in relation with said specified information and said weighting.

13. (Withdrawn) The information supply method according to claim 9, wherein said step for providing numeral values calculates a deviation value obtained from said standard deviation.

14. (Withdrawn) A computer readable storage medium for executing a program for an information supply method using a server connected to a network and a terminal device which requests said server for information over said network; said program executing the steps of: receiving a request for information in said server from said terminal device; receiving a weighting in said server from said terminal device; providing a numeral value of specified information in said server; ranking said information using said numeral value of said specified information and said weighting; and transmitting said ranked information from said server to said terminal device.

15. (Withdrawn) The storage medium according to claim 14, wherein said specified information is investment information including a theoretical value, an ups and downs rate, ROE, EPS, PER and PBR used to judge a bankruptcy probability and appropriateness of a stock price.

16. (Withdrawn) The storage medium according to claim 14, wherein said step for providing numeral values calculates a standard deviation of said specified information.

17. (Withdrawn) The storage medium according to claim 14, wherein said step for ranking ranks information from a weighted mean values using a standard deviation obtained in relation with said specified information and said weighting.

18. (Withdrawn) An information supply system comprising: a server connected to a network and a terminal device which requests said server for information over a network, wherein said server stores location information related to said information, and provides numeral values of specified information according to a request from said terminal device, and wherein said server provides to said terminal device information ranked using said digitized specified information together with location information associated with said information.

19. (Withdrawn) The information supply system according to claim 18, wherein said numeral value is a standard deviation of said specified information.

20. (Withdrawn) The information supply system according to claim 18, wherein said ranking ranks information from a weighted mean values using a standard deviation obtained in relation with said specified information and said weighting.
21. (Withdrawn) The information supply system according to claim 19, wherein said numeral value includes a deviation value obtained from said standard deviation.
22. (Withdrawn) An information supply system comprising; a terminal device which requests for information, a storage medium storing information and location information related to said information, and a computer system which ranks information using numeral values of said specified information and weighting entered from said terminal device, wherein said information supply system transmits said ranked information and location information related to said information to said terminal device.
23. (Withdrawn) The information supply system according to claim 22, wherein said numeral value include a standard deviation of said specified information.
24. (Withdrawn) The information supply system according to claim 23, wherein said computer system ranks information from a weighted mean values using standard deviations obtained in relation with said specified information and said weighting.
25. (Withdrawn) The information supply system according to claim 23, wherein said numeral value includes a deviation value obtained from said standard deviation.

26. (Withdrawn) An information supply method in an information supply system comprising a server connected to a network and a terminal device which requests said server for information over a network, said method comprises the steps of: receiving said server a request for information from said terminal device, receiving said server a weighting from said terminal device, providing numeric values of said specified information is digitized, ranking information using said numeric values of said specified information and said weighting, and transmitting said ranked information and location information related to said information from said server to said terminal device.

27. (Withdrawn) The information supply method according to claim 26, wherein said step for providing said numeric values comprises the step for calculating a standard deviation of said specified information.

28. (Withdrawn) The information supply method according to claim 27, wherein said step for ranking comprises the step of ranking information from a weighted mean using a standard deviation obtained in relation with said specified information and said weighting.

29. (Withdrawn) The information supply method according to claim 27, wherein said step for providing said numeral values comprises the step of calculating a deviation value obtained from said standard deviation.

30. (Currently Amended) An information supply system comprising a server connected to a network and a terminal device which requests said server for information over said network, wherein said server transmits ranked information using numeric values of specified information and weightings for said specified information a weighting entered from said terminal device to said terminal device according to a request from said terminal device, said weightings being entered from said terminal device, said information supply system comprising:

means for displaying information having [[the]] a highest score of said ranked information and other information of said ranked information on a results display area of a display unit display screen of said terminal device, each of said displayed information being concentrically graphically arranged about to be centered by said information having the highest score,

means for displaying a difference between scores of said information having the highest score and other information of said ranked information on the results display area of the display unit display screen of said terminal device as a distance from [[the]] a center of the results display area of the display unit of said terminal device, the center of the results display area being associated with the highest score screen, and

~~means for displaying information while changing information located on the center and said distance from the center on the screen in relation with a change of said weighting transmitted from said terminal device~~ means for dynamically displaying a change of centered information and changes in distances of said ranked information from the center of the results display area of the display unit of said terminal device in response to changes in said weightings transmitted from said terminal device.

31. (Currently Amended) An information supply method in an information supply system comprising:

a server connected to a network and a terminal device which requests said server for information over said the network, said the server transmits transmitting ranked information using numeric values of specified information and weightings for the specified information a weighting entered from said terminal device to said the terminal device according to a request from said the terminal device, the weightings being entered from the terminal device, said the method comprising:

displaying information having [[the]] a highest score of said the ranked information and other information of said the ranked information on a results display area of a display unit display-screen of said the terminal device, each of the said displayed information being concentrically graphically arranged about to be centered by said the information having the highest score,

displaying a difference between scores of said the information having the highest score and other information of said the ranked information on the results display area of the display unit display-screen of said the terminal device as a distance from [[the]] a center of the results display area, the center of the results display area being associated with the highest score screen, and

dynamically displaying a change of center information and changes in distances of the ranked information information while changing information located on the center and said distancee from the center [[on]] of the results display area in response to changes in the weightings screen in relation with a change of said weighting transmitted from said the terminal device.

32. (Currently Amended) A computer readable storage medium storing a computer readable program which executes an information supply method in an information supply system comprising:

a server connected to a network and a terminal device which requests said the server for information over said the network, wherein said the server transmits ranked information using numeric values of specified information and weightings for the specified information a weighting entered from said terminal device to said the terminal device according to a request from said the terminal device, the weightings being entered from the terminal device, said the computer readable program executing:

displaying information having [[the]] a highest score of said the ranked information and other information of said the ranked information on a results display area of a display unit display screen of said the terminal device, each of the said displayed information being concentrically arranged about to be centered by said the information having the highest score,

displaying a difference between scores of said the information having the highest score and other information of said the ranked information on the results display area of the display unit display screen of said the terminal device as a distance from [[the]] a center of the results display area screen, the center of the results display area being associated with the highest score, and

dynamically displaying a change of centered information and changes in distances of the ranked information information while changing information located on the center and said distance from the center of the results display area of the display unit of the

~~terminal device in response to changes in the weightings on the screen in relation with a~~  
~~change of said weighting~~ transmitted from said the terminal device.
